

Fountain Square PA Spec

Fountain Square offers a full, concert-level PA system with the capability of evenly dispersing full-frequency sound throughout the square. The entire system is portable and can be arrayed or utilized in a variety of ways in order to best meet the needs of the event. The system is also capable of being scaled-down for a smaller event, or supplemented for large or multiple-stage events:

- Main speakers consist of four JBL AM6315 3-way speakers, with matching subwoofers. Six JBL 12" stage monitors complete the speaker system. All amplification is by QSC, with Klark-Teknik speaker processing.
- Front-of-House and monitor mixing tasks are handled by an Allen and Heath GL2400 24-channel mixing console. Outboard processors include units from DBX and Lexicon.
- Playback facilities are provided for CD or cassette, and performances can be recorded to a Denon CD Recorder.
- Shure wired instrument and vocal microphones are available as well as Sennheiser EW345 Wireless handheld microphones.
- Any equipment, which is not specifically mentioned here, can be requested and provided for your event by our local partners.

Main Speakers

- (4) JBL AM6315 3-way, biamped main speakers
 - (1) 15" LF, (1) 8" MF and (1) 3" HF per cabinet
- (4) JBL AL6125 2x15" subwoofers
